

# Medical and health research in the field of hydrogen water

## <Best Drinking Water to Make at Home>

### I . Best Drinking Water

Reduction of water, hydrogen is dissolved in water. Hydrogen is dissolved in water, and take on a negative potential. This negative potential, a variety of water with useful features. Drinking water is a good market, is commercially available. Alkaline ion water or mineral water. This water, there is no negative potential. Cause of the hydrogen in a short time to stay. Dissipating into the air immediately. Therefore, give the potential negative electrolysis equipment. And, medical care, beverage, cosmetic, and industrial use.

Deep ocean water, drink more mineral water. The dissolution of hydrogen to be the best drinking water. Of course hydrogen can dissolve to commercial drinking water and city water. This is splendid drinking water reduced to its elements.

**\*Right Formula for Free: Published Patent JP/2006-167528「A maintenance circulation device of the function water」** TECHNO BANK companies, with the metal has developed a formula for reducing water. The right formula for reducing the water is free. For health and happiness of mankind. We, at the same time as magnesium from sea water to produce deep ocean water. In this business for human health and happiness is proud to help. Everyone in the world, "The Best Drinking water" and enjoy a healthy life.

#### 1. Reduction of Natural Water

<Fountain of Lourdes >

France / Pyrenees at the foot of a fountain in Lourdes, the Catholic holy site at the entrance of the cave Massapieru. Fountain of Lourdes, the Holy See also has been recognized as a miracle. The drinking water was restored condition, who are said about 6,000 people. Today, five million visitors a year. In addition, the water fountain to wait about three years can not be obtained.

<Water Nordenau >

Germany / Westfalen state . Nordenau on the water for about 600 people have visited. GADIKKU of German doctors, 540 people drank water to the survey. Most people are good condition and has reported.

## 2. Current Reduction of Water Use

(1) Medical <Medical and health research in the field of hydrogen water>

About hydrogen water, will introduce the world scientific literature.

(Source: <http://aboutsuisosui.com/>)

1. Lifestyle-related diseases.
  - 1-1. Metabolic syndrome.
  - 1-2. Diabetes.
  - 1-3. Arteriosclerosis.
  - 1-4. Infarction hyperlipidemia.
2. Related to neurological disorders: dementia, Parkinson's disease and Alzheimer's.
3. Associated gastrointestinal disease: bowel disease, liver disease, and pancreatic disease.
4. Related Kidney Disease: Nephritis, such as kidney dialysis.
5. Respiratory disease.
6. Neonatal disease.
7. Organ transplantation.
8. Sports. (Exercise).
9. Eye disease.
10. Antioxidants useful as a therapeutic agent.: And review papers.
11. Related to cancer.
12. Other diseases associated with oxidative stress.: Anti-allergy, sepsis, such as hearing impairment, the concentration of hydrogen in the breath and the ingestion of water.
13. Hydrogen water safety tests.

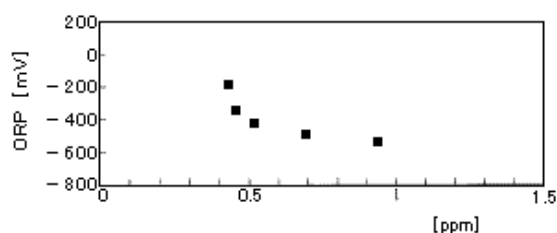

(2) Life (Drinking water, Cooking water, Cleansing water, Bath water). The spa reduced (Hot spring play). Aquaculture water. Industrial cleaning water.

(3) Industrial cleaning products: Using compressed hydrogen tank, the hydrogen is dissolved in pure water are provided. \*Source: 「Papers」KURITA KOGYO CO.,LTD (2005.8)

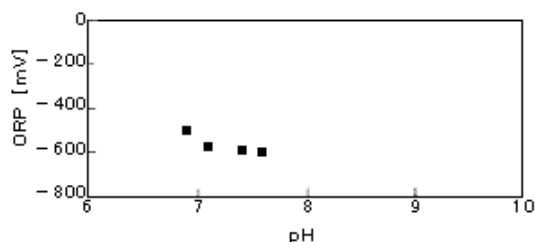

## II. Reduction of Water Production

Next, the measured data. The experiment, magnesium in the pack and using pure water. And the use of magnesium, even if there is no electrolysis device, anywhere can easily make a return to the water.

ORP (Redox) and the concentration of hydrogen

ORP (Redox) and pH

### III. Best drinking water to make at home

#### 1. More than one year of continuous use of magnesium pack to create

- ① Be prepared: Magnesium (Particle or chip) 5g extent. Weights (Glass bead) 30g extent. Cloth (Such as bleached cloth).
- ② Create a pack: Plastic bottles in cloth bags into strips to create diameter.
- ③ Close pack: Need to pack the weight of magnesium and close the seam.

#### 2. Reducing water use

##### (1) Making water reduction

Bottled water should be below 40 degrees. Some of them put a pack of magnesium. Wait an hour or more.

In the case of the commercial drinking water, it is pH 7.5. As for the minus electric potential,  $-50\text{mV} \sim -100\text{mV}$  are provided.

In addition, the chlorine in tap water contains changes to the bitter. Because of this trihalomethane carcinogenic substance does not occur. This can not be processed in the electrolytic equipment. Magnesium only be allowed to function.

If the water in plastic bottles and Shake once a month. To remove magnesium hydroxide.

##### (2) Use reduction water

Hydrogen radiates the reduction water in around 2 hours after coming out of PET bottle. Water is usable as drink and heating food during this period.

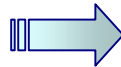

##### (3) Use of cut flowers in water.

Water A: Active agent on the market  
+ Reduction of water

Water B: Active agent on the market  
+ Water

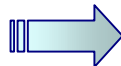

##### After two weeks.

Status: Wwater A and Water B, both without change.

##### After three weeks.

Status: A flower of water B begins to die.
